RE: Site Inspection, SM/047/032, AROC #1

On March 25, 1988 I inspected the AROC #1 Mine. It is immediately south of, and contiguous with the Uintah County Tarsands operation. A relatively large amount of tarsands material has been mined with a D-8 and stockpiled on site. It appears that additional mining will be limited unless AROC first moves a large amount of overburden. The current surface disturbance is directly overlapping some of Uintah County's previous work and appears to cover approximately five acres in total.
